👤 **Headline**

Azure Data Engineer | ADF - Databricks (PySpark) - Power BI - Data Quality & Optimization

👤 **Profile**

I'm a Data Engineer with around 2 years of experience working on Azure-based data solutions. I've designed and automated ETL pipelines, worked with big data tools like Databricks and Synapse, and helped improve data reliability and performance across banking analytics projects. I've also collaborated with cross-functional teams and contributed to discussions around data architecture and pipeline design.

🎓 **Education**

Bachelor of Technology (B.Tech), Vasireddy Venkatadri Institute of Technology 06/2019 – 05/2023
CGPA : 8.0 Guntur, India

💼 **Professional Experience**

Programmer Analyst, Cognizant Technology Solutions 12/2023 – Present
hyderabad, India

- Designed and automated end-to-end ETL pipelines that ingested 1–2 million banking transactions per day from SQL Server, MySQL, and flat files into ADLS Gen2 and Synapse Analytics using Azure Data Factory and Databricks (PySpark).
- Improved PySpark job performance by 15–20% using techniques like partitioning, caching, and optimized joins.
- Developed and maintained 8–10 ETL pipelines with built-in error handling and scheduling, which reduced manual monitoring by ~20% and lowered failure incidents by ~15%.
- Wrote SQL validation queries that improved reporting accuracy by ~10% for Power BI dashboards used by fraud detection and customer analytics teams.
- Assisted in monitoring Databricks clusters to optimize compute costs and resource usage.
- Worked with business analysts, QA, and senior engineers to deliver clean, compliant data solutions.
- Participated in small-scale Lambda architecture setups and handled both OLTP and OLAP workloads.

Skills

Technical Skills:

- Cloud Platforms: AWS (Glue, EMR, Redshift, Lambda, S3), Azure (Data Factory, Synapse), GCP (BigQuery, Dataflow)
- Big Data & Distributed Processing:
- EMR (Spark), Hadoop, Hive, Sqoop, HDFS
- Azure Data Factory (ADF), Azure Databricks, Azure
- Data Lake Storage Gen2 (ADLS)
- Azure Synapse Analytics, Azure SQL Database,
- MySQL
- PySpark tuning, SQL (Advanced), ETL pipeline automation
- Power BI dashboards and reporting
- Data validation and governance
- Python and Data ware house concepts

Soft Skills:

- Communication
- Teamwork
- Problem-solving
- Attention to detail
- Time management

Languages

- English
- Telugu
- Hindi

Certificates

Microsoft Certified: Azure Data Engineer Associate (DP-203)

(AWS certification in progress – targeting AWS Certified Data Analytics or Solutions Architect)

Mini Projects

Streaming state management for user session tracking using pyspark:

This project leverages PySpark Structured Streaming to implement real-time session tracking and stateful analytics. It processes a continuous stream of employee activity events—such as logins, clicks, and logouts—to dynamically manage session states. By applying techniques like sessionization, stateful aggregation, and windowed operations, the system provides live insights into session durations, user engagement, and cumulative actions. The project showcases the power of streaming state management in operational analytics, enabling responsive dashboards and real-time decision-making across domains like HR, security, and product usage.

Cloud Data Orchestration: From Buckets To BigQuery With Dataflow and Cloud functions

This project automates the end-to-end pipeline for ingesting, processing, and loading data from Google Cloud Storage into BigQuery using Cloud Functions and Dataflow. The workflow is event-driven: when a new file is uploaded to a bucket, a Cloud Function is triggered to launch a Dataflow job that transforms and loads the data into BigQuery. The solution demonstrates scalable and efficient cloud-native orchestration, highlighting seamless integration across Google Cloud Platform (GCP) services. It emphasizes real-time responsiveness, modular architecture, and cost-effective data movement.
